

Pneumatic access platforms for safe  
and efficient working at height

# Powered by air

## Falls from height

In 2004/2005 53 people died and nearly 3800 suffered a serious injury as a result of a fall from height in the workplace.

Falls from height are the most common cause of fatal injury and the second most common cause of major injury to employees, accounting for around 15% of all such injuries.

All industry sectors are exposed to the risks presented by this hazard.

To comply with the regulations, ensure you have the best equipment available – to protect you and your employees.

## LIFTMAN™

- The original
- Perfection through 20 years of operation
- Work safely and efficiently at height
- In everyday use in 34 countries
- User references available

## Advice from C&S Equipment

In April 2005 the **Working at Height Regulations** came into force making clear the responsibilities of management in all industries. In particular working from ladders is to be considered acceptable only where the duration is short, the risk is low and there are no practical alternatives. Details of the regulations can be found at [www.hse.gov.uk/falls/index.htm](http://www.hse.gov.uk/falls/index.htm)

It is a fact that working at height carries potential risks, and working on commercial, public service vehicles or any other large items of equipment generally requires personnel to get above ground level. A fall from height hurts every time.

To comply with regulations and, even more importantly, to provide a safe method of work on high-sided vehicles or other large items of equipment, C&S Equipment Limited supply WALLMAN® and LIFTMAN™ pneumatic work platforms.

Powered by compressed air WALLMAN® and LIFTMAN™ are safe for use in spraybooths and similar environments. Each provides the operator with easy movement in 3 dimensions and ensures improved efficiency and quality compared with traditional access methods, as well as much improved safety.

## WALLMAN®

- The original
- Perfection through 20 years of operation
- Work safely and efficiently at height
- In everyday use in 34 countries
- User references available
